

VACUUM PUMP PROTECTION FILTERS

P-VAC

DESCRIPTION

P-VAC filters have been specifically developed for protection of vacuum pumps. These filters are optimised for high-efficient removal of solid particles and other contamination from the suction side of vacuum pumps preventing damage to the pump. For P-VAC filter series we offer two filtration stages. Rough pre-filter "VACP" removes bulk liquid and large solid particles while high efficiency microfilter VACM removes very fine impurities which may damage the pump.

APPLICATIONS ⁽¹⁾

- Vacuum pumps

⁽¹⁾ P-VAC filter housing can be used in variety of applications. For applications not listed please contact us or your local dealer.

Standard is BSP pipe connection, other pipe connection on request.

CORRECTION FACTORS

- To calculate the correct capacity of a given filter based on actual operating conditions, multiply the nominal flow capacity by the appropriate correction factor C₁.
- To select a filter to match system flow conditions, multiply the system flow by the correction factor C₂ that corresponds to vacuum in the pipe.

MAINTENANCE

Replace filter element at least every 12 months or follow the instructions for specific filter element. Once per year make a visual check of filter housing and make sure there is no visual damage.
